

CHELATE-270

Complete Caustic Additive Package

DESCRIPTION:

CHELATE 270 is a clear, light-yellow colored liquid with an ultra low-foaming profile and added chelating and caustic enhancing agents. **CHELATE 270** enhances the cleaning power of your caustic solutions by increasing the penetrating and rinsing ability of your CIP solution, controlling minerals in the cleaning solution, preventing deposition or scale development on equipment, and reducing or controlling the foam levels in your CIP or cleaning system. **CHELATE 270** was designed to complete your CIP caustic solution.

PROPERTIES

- Powerful and concentrated detergency action
- Extra low-foaming profile in caustic solutions and alone
- Contains a very comprehensive defoaming blend
- Disperses oily residues
- Rapid, film-free rinsing
- Stable in concentrated caustic systems
- High temperature stable

USE LEVELS:

While each cleaning application, soil load, and system is different, the typical use level is approximately 2-6 gallons of **CHELATE 270** per 100-gallons of liquid caustic soda (Use rates per the caustic amount only, not the total CIP solution—eg. For each 100 gallons of 50% caustic added to your CIP tank, use 2-6 gallons of **CHELATE 270**).

BENEFITS:

- Potentially reduce the amount of caustic required to clean. By enhancing the performance of your caustic cleaning solution, you may realize a reduction in the total amount of caustic needed to clean.
- Improve your cleaning performance!
- Reduced and control foaming issues
- Quicker, easier rinsing possibly shortening rinse times and water usage.

CONTAINERS:

CHELATE 270 is available in drums, totes, and bulk. Some special packaging is available upon request.
